## Live Test Invigilation

Now teachers and administrators at AssessPrep can monitor and manage assessments in real-time at [www.assessprep.com](http://www.assessprep.com)

Open the test online from your account.

1. Navigate to Live Invigilation to administer your test in real-time. You can choose from the filters for All, Online, the students who have paused, tests with the calculator, spell check, the tests in End test mode, and the submitted tests.
2. A teacher can choose to add time, pause enable or disable the calculator and can report if there are any issues.
3. You can select multiple students from the list to perform certain invigilation tasks.

## Resuming a Test

### Teachers can resume any test online via the 'Attention Needed'

Now teachers/administrators can choose to approve the test resume requests for any test for a student online. A student while using **the latest version of the student's offline application** can request the Invigilator code once it asks to resume the test. The teacher can view such requests under the 'Attention Needed' section and choose to approve. This way the test is resumed for the students and the Invigilator code is not disclosed, the whole process works encrypted.

## Monitor Live Responses

Teachers and administrators can now in real-time view the student responses while they are writing the test. This feature can be very useful for conducting quizzes, polls, or during new admissions. Under the Live Dashboard, we have an option 'Live Responses' which shows a quick view with the student names and who all have attempted that task or not. Also, we can see full responses for any question/task by choosing the 'Full responses' option.
